SWOT analysis

proximity to Turin (esp. north area)	S
existing paths	
existing beekeeping	
green and blue corridor	
aesthetic value of nature	
diverse characters in N-S	
historical heritage (culture)	
industrial heritage	
existing sport facilities	

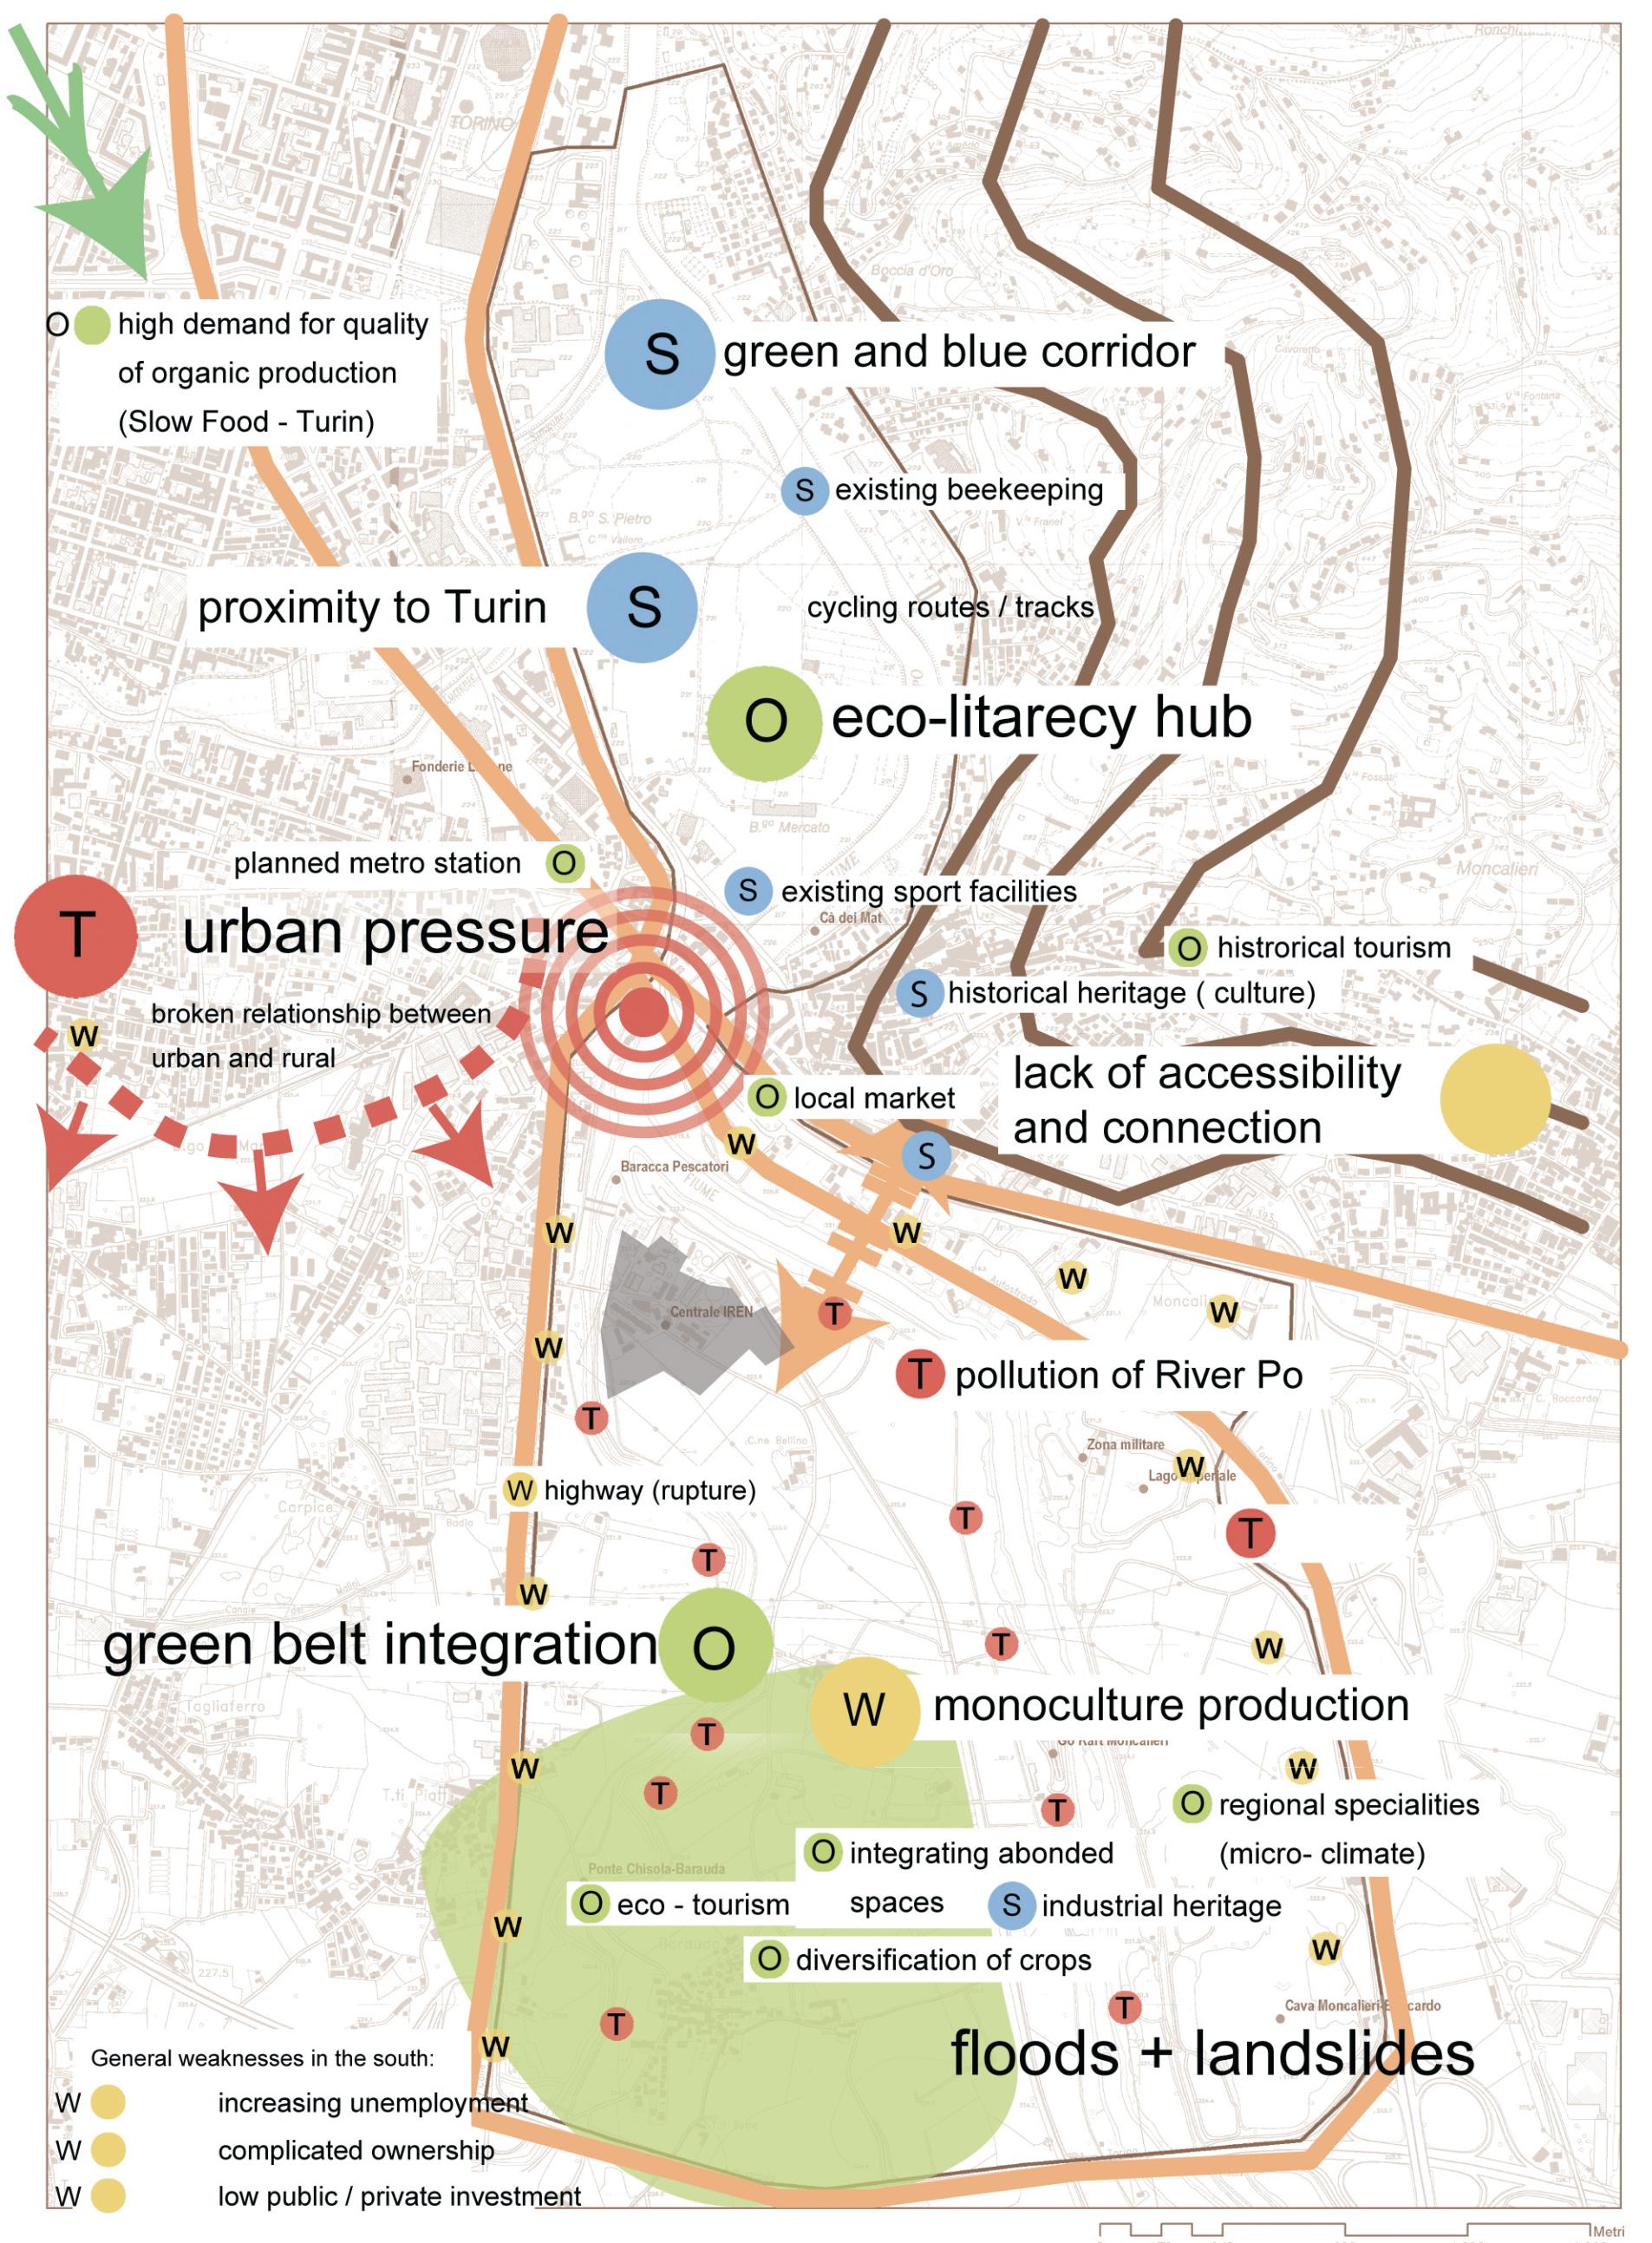

planned metro station	O
cycling routes / tracks	
high demand of quality of organic production (Slow food - Turin)	
local market	
green belt integration	
diversification of crops	
regional specialties (micro climate)	
eco-tourism	
diverse productive activities	
eco-litarecy hub	
historical tourism	
diverse recreational activities	
integrating abonded spaces	

lack of accessibility and connection (especially in the south)	
lack of space for organic agriculture	
lack of porosity (fragmentation of space)	
low public / private investment	
broken relationship between urban and rural	
highway (rupture and noise)	
monocultural production	
identitiy?	
complicated ownership	
increasing unemployment	
W incompatibility of crops with local markets	

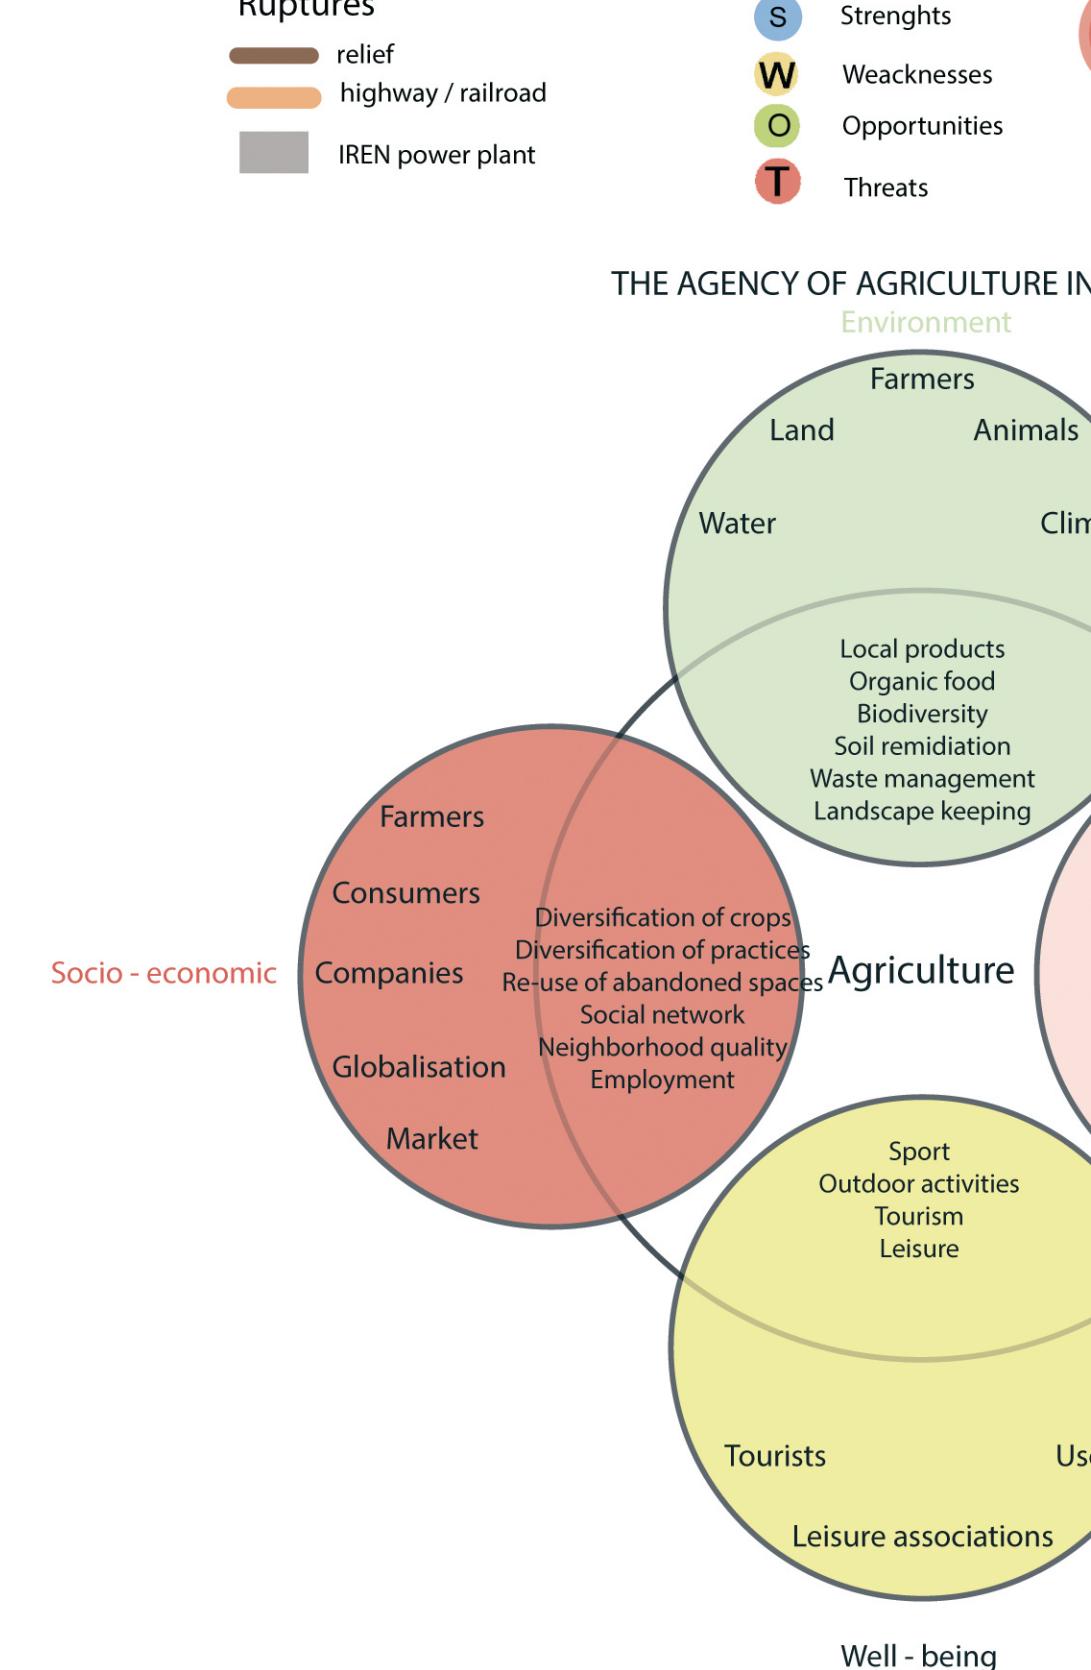

polarisation of urban and rural	T
noise (industry + quarry + highway)	
farmer extinction due to the economic pressure	
climate unpredictability	
floods + landslides	
urban pressure	
ecological degradation	
reduction in biodiversity	
pollution of River Po	

accessibility / mobility ecological
economy / production social

SWOT analysis map

THE AGENCY OF AGRICULTURE IN THE CITY

Agriculture is a multifaceted activity, not only varied in practices and processes but also showcasing different sectors of society and relevant topics. It is already the dominant activity of the study area in which a variety of actors participate. By intensifying them we aim to involve a wider audience with the people already present in the study area. We aim at preserving agriculture in Turin by integrating these practices to leisure activity. In the future we believe that growing vegetables, drying herbs, and tending the landscape will go side-to-side with conventional leisure activities such as playing football or sunbathing in the park.
